DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 5-7, 8, 10, 14-17, 21-24, 26, 30-32, 38-46, 48-59 are allowed.
2. The following is an examiner's statement of reasons for allowance: With respect to independent claims 36, 53 and 61, the instant invention is directed to a method and an apparatus for carrying a serial digital video over an optical network employing SONET/SDH or G.709. The relevant prior art of record, such as **Wilkinson (2002/0164149)** discloses combining video material and data. **James et al (2002/0019987)** disclose apparatus and method for an enhanced PCS communication system. **Srinivasan et al (2001/0023436)** disclose method and apparatus for multiplexing separately-authored metadata for insertion into a video data stream. **Shau (2006/0007355)** discloses data transfer using television video signal. **Noritomi (5,805,764)** disclose data transmitting apparatus. **Peng (7,508,846)** discloses physical capacity aggregation system and method. However, neither **Wilkinson, James, Srinivasan, Shau, Noritomi nor Peng** and any of the cited references teach or suggest, alone or in combination the feature of "...processing via said first processing chain individual ones of said one or more video streams when individual ones of said one or more video streams comprise serial video data, wherein said processing comprises identifying horizontal scan lines in segmenting said serial video data stream identifying vertical blanking intervals in said serial video data stream, and computing a payload header of N bytes for each data payload, where N is a provisionable value, including a two byte time stamp counter value and an associated two byte CRC value;

Art Unit: 2424

encapsulating said horizontal scan lines and said payload header into generic framing procedure transparent mode (GFP-T) frames; mapping said GFP-T frames into said network transport digital signal in accordance with said hierarchical digital transmission standard and inserting GFP-T idle frames into said network transport digital signal during said identified vertical blanking intervals...” as recited in combination with other features of independent claim 1 and similar limitations as recited in claim 38; the feature of “...receiving at an interface, a network transport digital signal formatted in accordance with a hierarchical digital transmission standard comprising generic framing procedure transparent mode (GFP-T) frames that encapsulate one or more video streams, wherein said one or more video streams comprise at least one serial video data stream, packetized digital video, and idle GFP-T frames that identify vertical blanking intervals in said one or more video streams...” as recited in combination with other features of independent claim 8; the feature of “... a mapper configured to identify vertical blanking intervals in said serial video data stream, encapsulate that formats said data payloads and corresponding payload headers into generic framing procedure transparent mode (GFP-T) [[GFP-T]] frames said GFP-T frames into a digital signal in accordance with said hierarchical digital transmission...” as recited in combination with other features of independent 17; the feature of “...a demapper configured to remove idle generic framing procedure transparent mode (GFP-T) frames from a network digital signal, demap that demaps GFP-T frames from said network digital signal deencapsulate said GFP-T frames to obtain a data payloads and payload headers therein, and extract horizontal scan lines of a serial video data stream from said payloads...” as recited in combination

Art Unit: 2424

with other features of independent claim 24; the feature of "...a network transport digital signal formatted in accordance with a hierarchical digital transmission standard comprising generic framing procedure transparent mode (GFP-T) frames that encapsulate one or more video streams, wherein said one or more video streams comprise serial digital video, and/or packetized digital video, and idle GFP-T frames that identify vertical blanking intervals in said one or more video streams..." as recited in combination with other features of independent claim 39.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ullman et al (2001/0037376) disclose enhanced video programming system and method for incorporating and displaying retrieved integrated internet information segments.

Hartson et al (7,333,153) disclose expanded information capacity for existing communication transmission systems.

Lee et al (6,049,539) disclose access system and method for providing interactive access to information through networked distribution.

Art Unit: 2424

Pocock et al (6,674,460) disclose television system distributing a dynamically varying number of concurrent video presentations over a single television channel.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **ANNAN Q. SHANG** whose telephone number is **(571)272-7355**. The examiner can normally be reached on 7:00am-4:00pm.
